

THURSDAY DECEMBER 10th, 2020 – 6 AM WEATHER FORECAST

Clear skies and dewpoints hanging in the mid to high 40s has allowed the temperature to briefly drop below 50 degrees to start this morning. Some patches of fog will be possible through dawn, otherwise sunshine this morning will mix with a few increasing clouds this afternoon when highs reach the middle 70s. Dewpoints will climb into the 50s today thanks to a gradually stronger breeze from the southwest and eventually south this afternoon with speeds near 10 mph and gusts in the teens. Tonight temps will drop to around 60 degrees by midnight, however they will likely start trending upwards by the time the sun comes up with highs tomorrow in the lower 70s. Look for more and more clouds to move into our area tonight and Friday as our rain chances go up. We will be monitoring the radar Friday morning with some rain expected before lunchtime, however the majority of showers and possible storm or two comes in the afternoon hours. The first piece of this trough exits quickly Friday night with cooler weather this weekend, but the models are showing a secondary wave of clouds and showers to be possible on Sunday.
