Roomba Combo®

Robot Vacuum & Mop 

Roomba Combo® j9+ Fast Facts

The Roomba Combo® j9+ is iRobot's most powerful and intelligent robot vacuum and mop, tackling dirt, pet fur and debris with unmatched precision. With Dirt Detective and SmartScrub, the Roomba Combo® j9+ will prioritize the dirtiest rooms in the home first based on insights from cleaning history, while adding scrubbing action on hard surfaces with SmartScrub mopping.

Powerful Vacuum. Powerful Mop.

- The Roomba Combo j9+ is the ultimate cleaning experience with powerful debris pickup, SmartScrub mopping, and the intelligence to prioritize where to clean.
- Unlike competing 2-in-1 robot vacuum and mops that barely lift their mop pads, if at all, the Roomba Combo j9+ features D.R.I. (Dry Rug Intelligence) to keep even high-pile rugs dry. This is made possible because of its unique Auto-Retract Mopping System that lifts the mop all the way to the top of the robot when detecting carpet, preventing wet messes.
- The robot's two fully retracting, durable, metal mop arms raise the mop pad when the robot senses carpet and rugs, allowing Roomba Combo j9+ to vacuum and mop in a single cleaning job, saving time while keeping floors fresh and clean.
- A 4-Stage Cleaning system combines our Edge-Sweeping Brush, Dual Multi-Surface Rubber Brushes, 100% more powerful suction¹ and pressurized scrubbing action achieve a deep, efficient cleaning.
- The Roomba Combo j9+ robot vacuum cleans deeper¹, pulling up embedded pet hair, dust, and debris from floors and carpets with 100% stronger power-lifting suction¹. It's the #1 robot vacuum for dirt and dust pickup.²
- With SmartScrub enabled, the Roomba Combo j9+ will scrub back-and-forth with consistent downward pressure to eradicate messes. SmartScrub tackles stubborn messes like grime with 2x deeper scrubbing.³
- Carpet Boost automatically adjusts suction when it detects carpets for a deeper, more efficient cleaning of different messes.

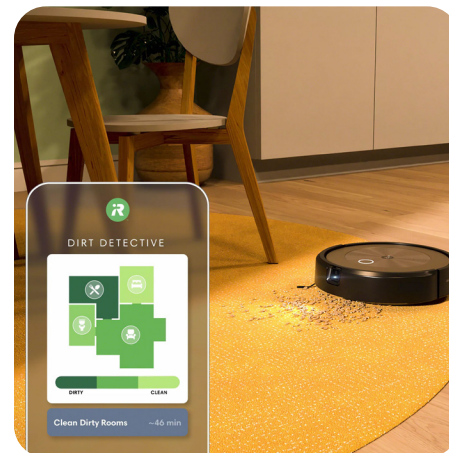

Identifies obstacles and avoids hazards to finish the job.

- Roomba Combo j9+ doesn't just learn your home, it reacts to it in real time with PrecisionVision Navigation, giving the robot the ability to identify and avoid common obstacles, such as cords, clothes, shoes, socks, backpacks, pet bowls, pet toys and solid pet waste.
- The Roomba Combo j9+ recognizes more than 80 common objects,⁴ which enables the robot to also clean more specific places on command, like couches, tables, counters and holiday trees, and can also automatically detect and proactively recommend Clean Zones around dishwashers, toilets, ovens/stoves, litter boxes and pet bowls.
- Built with more pet features than any other robot, Roomba Combo j9+ guarantees that it will identify and avoid solid pet waste; backed by a 'Pet Owner Official Promise,' iRobot will replace any Roomba Combo j9+ that doesn't avoid pet waste.⁵

Makes a plan, Always ready to clean.

- Taking automation to a new level, the Roomba Combo j9+ is equipped with a stylish new Clean Base® Auto-Fill Dock that empties debris for up to 60 days and refills liquid for up to 30 days. During cleaning jobs, the Roomba Combo j9+ will also – as needed – independently refill its water bin, recharge its battery and empty its dustbin to resume cleaning where it left off. It's also iRobot's quietest self-emptying dock yet.
- Start cleaning your way even faster. Straight out of the box, the Roomba Combo j9+ robot vacuum will create a complete map of your home 7x faster than the previous mapping technology and automatically label each room so you can clean wherever you want, whenever you want after just one run.
- Powered by iRobot OS, the Roomba Combo j9+ gets smarter over time. With Dirt Detect¹, the Roomba Combo j9+ analyzes past cleaning preferences, patterns, and timing, to automatically prioritize rooms that need the most attention, so customers never need to plan where to clean. Dirt Detect¹ will also customize settings, like suction and number of cleaning passes room-by-room.
- iRobot OS works with your routines too. It knows the specific rooms and times you like it to clean—in the kitchen after breakfast, for example—and can suggest personalized cleaning schedules. iRobot OS can even suggest extra cleaning when your area's pollen count is high or during pet shedding season.
- The Roomba Combo j9+ features iRobot's strongest battery for longer cleaning missions. When the battery gets low, the robot will send itself to the Clean Base® dock for a recharge and then will pick up vacuuming where it left off its cleaning mission.
- The Roomba Combo j9+ can also leverage other features powered by iRobot OS, such as Clean While I'm Away, Do Not Disturb, Child & Pet Lock, Cleaning Time Estimates and Quiet Drive.
- iRobot OS understands more voice commands than any other robot, with approximately 600 supported Alexa® and Google Assistant® commands - and Siri Shortcut Integration.

Beautifully designed for your home

- The Roomba Combo j9+ blends seamlessly into homes with its appealing brushed metal finish, sleek silhouette and intuitive one-button design.
- The robot's Clean Base® Auto-fill Dock is beautifully crafted from premium materials with a wood-like top to double as a useable surface, and features additional storage inside for extra bags and mop pads.

¹Compared to Roomba Combo i Series.

²#1 cleaning system based on IEC 62285-7 on hard floor and carpet with dust.

Cleaning system available in multiple iRobot products.

³Compared to standard vacuum & mop mode for grime

⁴Robot behavior varies by object.

⁵Offer valid for 1 year from purchase and covers replacement product only.
