

EGG SOURCING STORY

Kellanova is committed to animal welfare and building responsible supply chains for our ingredients, including egg products.

The vast majority of Kellanova's portfolio is plant-based.

We buy a very small amount of liquid and powder eggs, and dried egg whites.

Eggs make up **LESS THAN 1%** of our total ingredient and material spend.

Globally, we transitioned about 70% of our egg portfolio by the end of 2023 and expect to transition about 74% by the end of 2024, through both egg elimination and increased cage-free egg sourcing.

| | 2022 EGG VOLUME | 2023 EGG VOLUME | EXPECTED 2024 EGG VOLUME |
|------------------|------------------------------|-------------------------------|-------------------------------|
| Combined Metric* | 51% (1% cage-free) | 70% (14% cage-free) | 74% (25% cage-free) |

*Estimated percent of global egg portfolio transitioned through egg reduction and cage-free sourcing since 2018.
