## VEHICLE HIGHLIGHTS

### KEY FUNCTIONAL CHANGES

- The 2021 Mazda6 introduces a new Special Edition variant, the Kuro Edition, which further extends our unique product offerings and many special versions that the 2021 model year has brought.

### DROPPED, MOVED, NEW FEATURES (NEW ARE DENOTED IN BOLD) VERSUS 2020 MAZDA 6

#### GS GRADE:

- Rear heated seats (moved to GT, to better observe cross-carline consistency with CX-5, segment alignment)

#### GS-L GRADE:

- Skyactiv-G 2.5 T Dynamic Pressure Turbo engine option dropped
- **Leatherette replaces leather upholstery seats**
- 19-inch Alloy wheels (dark grey lustre) replaced with 17-inch (dark grey lustre)
- 10-way Power adjustable driver's seat (including power lumbar support) is moved to GT, to observe cross-carline consistency with CX-5

#### GT GRADE:

- Skyactiv-G 2.5 with Cylinder Deactivation (moved to GT, to observe cross-carline consistency with CX-5)
- Skyactiv-G 2.5 T Dynamic Pressure Turbo engine option dropped
- **Wireless Apple CarPlay™**

#### KURO EDITION:

- Donor vehicle is GT
- Skyactiv-G 2.5 T Dynamic Pressure Turbo engine
- **Garnet Red leather trimmed upholstery**
- **Unique Kodo centre stitch with grey contrast thread**
- **Middle dash and door pads with red stitching**
- **Black trimmed decorative dash panel**
- **Black trimmed front and rear door panels**

## VEHICLE HIGHLIGHTS

## G-VECTERING CONTROL (GVC)

**WHY****PROGRESSION OF THE JINBA-ITTAI PHILOSOPHY**

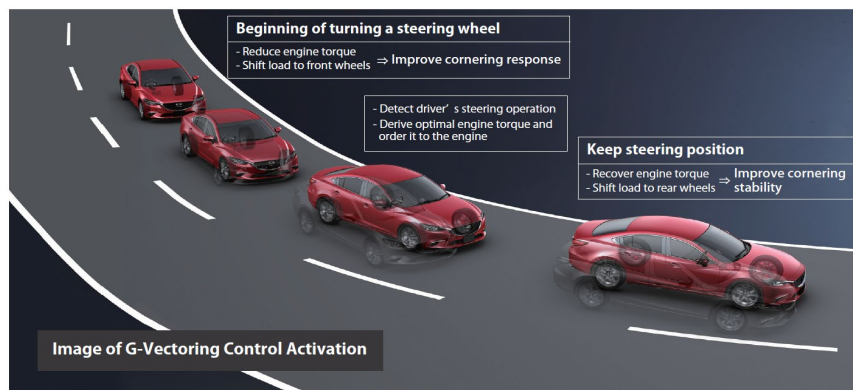

Mazda aims to offer vehicles that provide driving pleasure and enrich the lives of their owners. We have achieved this through the pursuit of Jinba-Ittai, a feeling of unity between driver and vehicle. GVC is the first technology within Skyactiv-Vehicle Dynamics, and is part of the Skyactiv series of technologies. Skyactiv-Vehicle Dynamics was conceived to integrate control of the engine, transmission, chassis and body to enhance the car's Jinba-Ittai feel; a sense of connectedness between car and driver that differentiates Mazda vehicles from others.

**HOW****ENHANCING CHASSIS PERFORMANCE USING THE SKYACTIV ENGINE**

GVC is only possible thanks to the existence of Skyactiv engines, which enable precise control of drive torque, and the Skyactiv-Chassis, which facilitates ideal vehicle behavior. GVC maximizes tire performance by focusing on the vertical load on the tires. The moment the driver starts to turn the steering wheel, GVC controls engine drive torque to generate a deceleration G-force, thereby shifting load to the front wheels. This increases front-wheel tire grip, enhancing the vehicle's turn-in responsiveness.

Thereafter, when the driver maintains a constant steering angle, GVC immediately recovers engine drive torque, which transfers load to the rear wheels, enhancing vehicle stability.

This series of load transfers extracts much more grip from the front and rear tires, improving vehicle responsiveness and stability according to the driver's intentions.

**A NATURAL CONTROL EFFECT BASED ON A HUMAN-CENTERED DEVELOPMENT PHILOSOPHY**

Mazda studied the biomechanical relationship between the human and a vehicle in operation in order to tune the system to maximize a smooth interaction. The reaction rate and amount of control has been aligned with human sensibilities.

## 2021 MAZDA 6

## VEHICLE HIGHLIGHTS

### BENEFITS OF GVC

#### **CONFIDENCE INCREASES AS THE CAR BEHAVES MORE IN LINE WITH DRIVER EXPECTATIONS**

The driver operates the steering wheel to keep the vehicle within its lane whether driving in a straight line or cornering. However, due to irregularities and undulations in the road surface, the vehicle does not always travel along the expected line, forcing the driver to make corrections with the steering wheel.

Since GVC provides enhanced response to slight steering wheel operations, it greatly reduces the size and frequency of steering corrections.

Because GVC simultaneously enhances handling and stability by optimizing the vertical load on the tires depending on driving conditions, it demonstrates even greater effectiveness in rain and snow and on poor road surfaces.

GVC is also effective at reducing fatigue for both driver and passenger. Fatigue steadily builds up as the driver continues to make minor steering corrections. Since GVC helps alleviate these corrections, it reduces accumulated fatigue over long distances. And by smoothing the transitions between G forces, GVC suppresses the swaying of head and body experienced by vehicle occupants, enabling them to enjoy a more comfortable drive.

Reduction in torso-sway with GVC

\* In-house passenger seat comparison of left-hand turn at 30 km/h (lateral acceleration of 0.4 G)

Moving forward, Mazda plans to deploy GVC in most of its new-generation vehicles.

### G-VECTORING CONTROL PLUS (GVC PLUS)

Newly added to the smooth and efficient vehicle behaviour delivered by G-Vectoring Control (GVC) is braking control. This further improves vehicle behaviour for even easier control and greater reassurance when changing lanes on the highway, or maneuvering to avoid emergency situations or to counter slippery road conditions on snowy roads.

Applying just a hint of braking to the outer tires when returning the steering wheel to its neutral position while cornering increases the stability of the direction of yaw movement. Because the steering wheel angle is also reduced in the process, it helps maintain a stable vehicle posture for easier, more predictable handling in such situations.

The car leans very little and the steering wheel returns quickly for reassuring and predictable handling

The car leans more, causing worry, and the steering wheel angle is large, so handling is less predictable
