

WEDNESDAY, JUNE 14, 2017 – 5 AM WEATHER FORECAST

The warm front passed through Erin Hills a couple of hours ago with showers and storms that fired up just east of the course and moved out of over Lake Michigan, so for once we actually got lucky! However looking at the radar out to our west, we'll need more luck in order to get through today unscathed. The latest hourly model projections show the activity in Iowa moving east faster than anticipated. There are some models that have this activity falling apart as it approaches our area, but we will need to be on our toes as early as 10 AM through 1 PM. If this activity does completely fall apart midday, then this afternoon will be more active. For the time being though it looks a bit more likely that we'll get clipped midday by this activity approaching from the west and then hopefully not see any more action late today. We are under a slight risk for severe weather today and tonight as a cold front pushes at least one more wave of moisture our way overnight. There is still the chance we could wind up with less than an inch of rain over the next 24 hours, but right now the model consensus is right around that one inch mark. The forecast for Thursday continues to improve from 7 AM on as dewpoints drop from the 60s into the 50s. Unfortunately as a series of disturbances remain in the picture flying through Wisconsin Thursday night, Friday night and Saturday night.
