FRIDAY, MAY 17, 2019 – 5 AM WEATHER FORECAST

Well for the first time since Monday we've got ourselves a complicated forecast. Skies are starting off mostly clear with temps in the mid 60s, however if you look at the radar across Charleston, WV down through Asheville, NC you'll see what looks to be a guaranteed chance of rain for us. High level clouds will start to mix with our sunshine by mid morning as every computer model has the activity on radar to our northwest falling apart before reaching Southern Pines. However since a lot of the models are not even starting off with the exact right radar picture, the thinking is that a 40% chance of a shower or storm needs to be mentioned late this morning and early this afternoon. This is in the event that a portion of those showers and storms are able to hold together or kick up enough instability that something pops up on radar across central North Carolina. If we manage to sneak by unscathed, then a shower or storm is not completely out of the question again late this afternoon or this evening. Otherwise it should be our first real hot day of the week with highs near 90, dewpoints in the 60s and a decent breeze at times from the southwest.
