

FRIDAY, DECEMBER 11th, 2020 – 6 AM WEATHER FORECAST

Temperatures are already starting to rise from their overnight low near 60 degrees and look for our high today to come by lunchtime in the lower half of the 70s. Despite possibly seeing some glimpses of the sun today, especially during the first half of the morning hours, increasing clouds will give us a lot of mostly cloudy skies today. Showers are already picking up on radar to our northwest, west and southwest. While we could see our first few raindrops as early as 9 AM or so, the first real measurable shower activity is more likely closer to noon. Showers will be on and off (overall 80% chance) as we work our way through this afternoon with an embedded storm possible (40% chance). Rainfall amounts are still likely to stay below half an inch with some models showing as little as a tenth of an inch possible in the luckier spots around Houston. This first piece of this trough exits tonight leaving the potential for fog early Saturday morning, then the skies clear out through Saturday afternoon with highs now aiming for 70 degrees. The bad news is the second piece of energy we have been waiting for is looking more wet on Sunday.
