

### SATURDAY, DECEMBER 12th, 2020 – 6 AM WEATHER FORECAST

We had 0.39" of rain on Friday and are now left with low clouds and some patches of fog/mist that will clear out as we head through this morning with sunshine filtered by high clouds the rest of the day. Temps starting off around 60 degrees will try to reach 70 degrees this afternoon with winds more out of the north today. That northerly flow will bring us a temporary break in the humidity as dewpoints drop through the 50s. Tonight we will see increasing clouds with lows in the mid 50s as our wind shifts to come more from the east. Radar watching will start right away Sunday morning with some showers and sprinkles developing around sunrise. Then as we get closer to lunchtime and beyond, the activity on radar will become more moderate to heavy at times with scattered showers and possibly a few storms since this wave of upper level energy will be closer to Houston. Temperatures and dewpoints are forecast to climb into the 60s on Sunday as our wind spends most of the time from the south and east before switching over to the north and west by the end of the day with much colder weather moving in Sunday night.
