

MONDAY, JULY 5, 2021 – 5 PM WEATHER FORECAST

Highs ended up right around 90 degrees a little while ago when dewpoints were at 70 degrees giving us a heat index in the upper half of the 90s. We are watching showers and storms some 100+ miles to our north and northwest right now, however they are forecast to generally stay well to our north this evening before dying down tonight just giving us a few high clouds as lows bottom out near 70 degrees. Mostly sunny skies through at least the first half of Tuesday will result in similar conditions to what we say today with slightly above average heat. The radar will become impressive with showers and storms to our north and west moving in our direction as Tuesday afternoon progresses as clouds increase first. Eventually though this action will decrease in intensity and coverage Tuesday evening just giving us scattered showers/sprinkles and maybe a rogue storm overnight Tuesday night. There could be a couple radar echoes nearby to begin Wednesday, otherwise gusty northerly flow will dry out the atmosphere as Wednesday wears on with morning clouds giving way to sun in the afternoon and highs in the 70s.
