

### FRIDAY, June 24th, 2022 – 5 AM WEATHER FORECAST

Light and variable wind yesterday afternoon into this morning. combined with low level moisture from yesterday's showers, has indeed led itself to the development of stratus and patch fog across the region which is expected to hang on for a few hours after sunrise with the majority of it burning off mid morning on Friday. Once the sun is able to present itself expect to see temperatures warm up quickly climbing into the 70s before noon and topping off in the low to mid 80s this afternoon under mostly sunny skies. Winds will continue to remain light and variable this morning as the fog attempts to hold on before then blowing lightly, mainly from the west, with speeds starting to pick up around lunchtime averaging near 5 mph gusting up to 9 mph at times. Look for mostly clear skies overnight with a high pressure dominating weather throughout the region allowing lows to fall back to near 60 for Saturday morning while winds are expected to become light and variable providing the chance once again for fog. Saturday and Sunday continue to look ideal temps warming a bit into the upper 80s before a cold front approaches late Sunday evening.
