

MONDAY, JUNE 12, 2023 – 5 AM WEATHER FORECAST

The June Gloom that we saw over the weekend continues this morning with marine layer cloud cover and the occasional patch of mist possible. Temps are starting off near 60 degrees and will struggle today to reach 70 degrees. The good news is that even if we don't actually bump up against 70 degrees this afternoon, it will feel that warm because clouds this morning will give way to more sunshine this afternoon. Mostly cloudy skies will become partly sunny by early afternoon with mostly sunny skies coming by dinnertime or so for a nice movie quality sunset. Clear skies during the overnight hours tonight could give us more dew Tuesday morning than we have seen. Then the marine layer is forecast to fill back in the cloud deck by breakfast time tomorrow before a Star Wars like transition wipe to mostly sunny skies Tuesday afternoon. The wind will pick up more the next couple of afternoons as we see more sunshine heading into midweek, the only plot twist to be concerned with is the potential for fog each morning, especially Thursday.
