

TUESDAY, AUGUST 29th, 2023 - 6 AM U.S. Senior Amateur Weather Forecast

Strong mid - level flow out of the bay area directly into the Tahoe region has kept things more mild this morning than initially expected as overnight lows stayed in the 50s MON night. Winds will be stronger this morning that we have seen in previous days, with the intensity then increasing through the morning as average speeds look to top out at 13 - 16 mph with gusts in the mid 20s at times into the early evening as flow then becomes more westerly overnight before eventually returning to light flow out of the SE for WED morning. As this surface boundary moves eastward to our north, temps will be back near normal for this time of year this afternoon under mostly clear skies. A fleeting ridge will attempt to established itself overnight TUE into WED morning, returning drier, warm air aloft and acting to push our highs back into the low 80s on WED before being overthrown by a deepening trough working its way down from on the PNW on THU, acting to once again increase wind averages back into the mid teens with gusts in the 20s with temps then falling back into the mid 70s for our high just at play finishes up that afternoon.
