

## TUESDAY, SEPTEMBER 12, 2023 – 6 AM WEATHER FORECAST

Yesterday's 0.19" of rainfall put the 5-day total over 2 inches. This moisture is hung up on the ground this morning in the form of fog, lasting through 7:30 AM and dissipating by 8 to 8:30 AM, depending on the local density of it. After that, an 80-degree, dry day is upon us. A slight chance of a rain shower can't be ruled out later this afternoon, but overall, today is in a much better spot than days' past. Unfortunately, as Tuesday night transitions to Wednesday morning, we will feel the effects of a strong cold front. Rainfall between 0.50 to 1.50" is likely on early Wednesday morning, centered around 6 to 8 AM. After lunchtime, the precip becomes more scattered, and dry air begins to intrude from the northwest. Winds will finally be felt from a consistent northwest direction, ushering in cool and sunny conditions for Thursday. Joy to the world, Thursday will be a true fall-like day.
