

FRIDAY, JUNE 14, 2024 – 5 AM WEATHER FORECAST

Take precautions today as we are going to endure the hottest day of the week with temps starting off in the 60s, but will then top out in the low to mid 90s this afternoon. So drink enough water and stay in the shade or air conditioning when possible as dewpoints fluctuate in the 60s creating a heat index in the mid to high 90s for a time after lunch. Sunshine this morning will bake the sandhills with light and variable winds. The usual afternoon cloud field will develop to provide some shade, but as has been the trend the last two afternoons, look for a little less than we had yesterday developing a little later as well. Winds could gust a couple of times up around 10 mph this afternoon, but generally will be average around 5 mph from the north and west with still some lulls at times. Eventually a cold front approaching from the north and northwest will increase our threat of a shower or storm to 20% by 5 PM onward with a 40% chance of a shower and 20% chance of a storm coming closer to sunset. If we see any moisture, the models show it coming during the middle of tonight followed by a big change in the wind for Saturday.
