

MONDAY, JUNE 24, 2024 – USSO 5 AM Weather Forecast

With the additional 0.05" falling between 10 PM and 3 AM this morning, heavy low - level clouds will continue to quickly move over the course through the morning as a strong southwest breeze continues to blow in off the water. At the surface, strong winds will help to dry out the previous three night's rain events, and similar to SUN, generate patches of fog around the course while doing so. As conditions at the surface dry out, the sun will look to make an extended appearance this afternoon pushing highs into the upper 70s under partly cloudy skies. As the low works it way east, winds will shift over to the NW tonight as they begin tapering off for TUE, helping drop down dewpoints into the upper 50s overnight tonight ahead of winds returning over to the SW late TUE afternoon, helping return them back up near 70 degrees ahead of WED night showers that look to hang around into the first round THU. Flow out of the NW to start the day tomorrow will act to slow daytime heating but mostly sunny skies will once again have our highs pushing 80 degrees TUE before returning to the mid 70s then on WED as SW winds return to the mid teens.
