

SUNDAY, JUNE 30, 2024 – USSO 5 AM WEATHER FORECAST

Waking up to a ‘soupy’ morning at the course as showers pass overhead as the sun starts to come up. Accumulation totals remain on a downward trend for the first half of the day with totals now under 0.25” falling since midnight as light rain dries up around 8 AM. Winds have dialed back somewhat from the original forecasted intensity with speeds this morning around 10 mph gusting into the upper teens then daytime heating tries to increase intensity this afternoon into the teens with gusts in the mid 20s at times ahead of the arriving afternoon cold front. Fog will be the major concern this morning and possibly again at times this afternoon as dewpoints have settled into the low 70s. Temps won’t be able to warm up as quickly due to the periodic cloud cover associated with this morning’s warm front confining highs to the lower 70s. Storms this evening will make their way through the region riding the cold front that will likely include electricity and more precipitation than we have seen with Sunday morning’s warm front activity. Flow then shifts northwest overnight keeping temps in the low 70s for Monday with possible afternoon showers.
