

### WEDNESDAY, JULY 31, 2024 – 12 PM WEATHER FORECAST

The running rainfall total is 3.02". Today features the lowest chances of rainfall going forward, but we will still watch the skies later this evening for any rogue pop ups. Tonight may include an impact from one of the developing thunderstorm complexes upstream, creating complications for early Thursday. The potential for impact is high enough to call for measurable precip between 11 PM and 5 AM. The challenge going forward lies in the environment, providing ample moisture for anything to feed off of. Thursday is no exception, with chances increasing especially after 2 PM. Pray for the best and prepare for the worst through the final putt.
