

SUNDAY, MAY 17, 2026 - US AMATEUR FOUR - BALL 6 AM FORECAST

That hint of moisture has returned this morning with dewpoints up near 40 degrees. Coupled with the colder air being ushered in from the northwest, expect to see a thin layer form not long after sunrise. A thin layer of cloud will make an appearance this morning, taking advantage of the available moisture, helping to limit our heating somewhat with temperatures slowly climbing through the 70s throughout the morning reaching 80 degrees around lunchtime and topping out then in the mid 80s this afternoon as clouds once again form early this evening. Winds will be at their peak in terms of speed today. Starting the morning light, intensity will increase through the morning as flow transitions over to the southwest early on this afternoon as averages climb into the mid-teens with gusts touching 30 mph at times. Moisture and cooler air will linger into Monday with a heavier dew expected to start the day as highs as high keep to the upper 70s while blustery conditions subside.
