Roomba® Robot Vacuum

The iRobot® Roomba® s9+ robot vacuum with Clean Base™ Automatic Dirt Disposal is the most intelligent, powerful, and deepest cleaning Roomba® robot to date. The Roomba s9+ offers customers the deepest clean yet¹ with an advanced 3D sensor, a powerful new cleaning system and PerfectEdge® Technology.

Hugs edges, gets into corners

- With PerfectEdge® Technology the Roomba s9+ finds dirt where it hides.
- A new advanced 3D sensor constantly scans what's immediately ahead of the Roomba s9+ at a rate of 25 times per second to help the robot get deep into corners, along edges and clean large areas efficiently.
- 30 percent wider² Dual Rubber Brushes provide more cleaning with every pass. Each brush is uniquely designed with rubber treads that stay in constant contact with different floor surfaces – from hard floors to carpets.
- The specially designed Corner Brush uses five 30mm arms to grab dirt and debris from deep in corners and along walls, directing it into the robot's path to be vacuumed up.

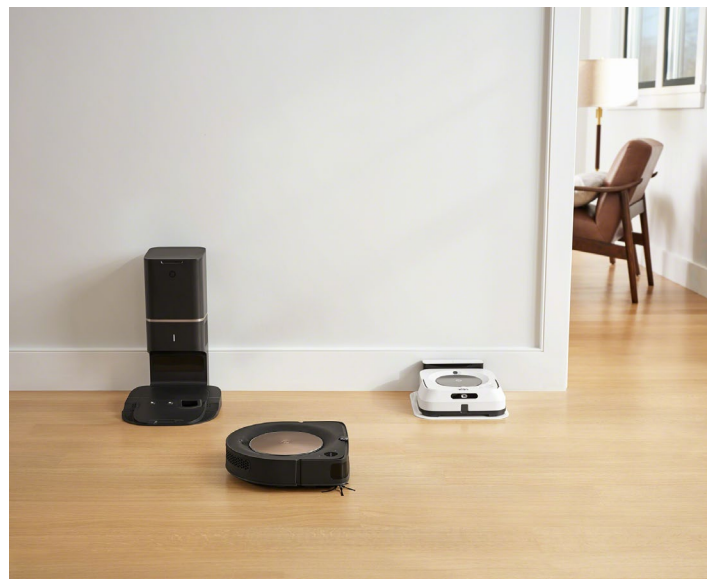

Powerful cleaning throughout the entire home

- The Roomba® s9+ robot vacuum uses Imprint™ Smart Mapping technology to learn a home's floor plan, determining the best way to clean each room.
- iRobot's patented iAdapt® 3.0 Navigation with vSLAM® technology helps the Roomba® s9+ seamlessly and efficiently navigate a home, keeping track of where it's been and where it has yet to clean.
- The Roomba s9+ boasts a powerful new cleaning system with up to 40X the suction³ over previous generation Roomba vacuums.
- When detecting carpeted floors, the Roomba® s9+ employs Power Boost technology to automatically increase suction to pull in dirt and debris from deep within carpet fibers.
- With Wi-Fi® connectivity, the s9+ lets you customize cleaning with the iRobot HOME App or control it hands-free with Alexa enabled devices and the Google Assistant.

Automatic emptying and Anti-Allergen Technology

- The Roomba® s9+ robot vacuum takes care of the cleaning from start to finish – emptying its own bin, so you don't have to think about vacuuming for weeks at a time.
- The enclosed bag holds 30 bins of dirt and debris for easy disposal without the cloud of dust.
- The Roomba® s9+ automatically empties and recharges as needed and continues cleaning until the job is done.
- The Roomba® s9+ features an Anti-Allergen System that traps and locks dirt, debris and allergens from escaping from the robot or its Clean Base™, preventing the release of dirty air back into the home.
- High-Efficiency Filter captures 99 percent of mold, pollen, and dust mite allergens.

Dynamic duo: Roomba® vacuums then Braava jet® mops

- Using Imprint™ Link Technology, the Roomba® s9+ robot vacuum coordinates with the new iRobot® Braava jet® m6 robot mop to deliver an extra level of clean by automatically vacuuming then mopping, without any effort from the user.
- Users can initiate a Linked clean in the iRobot HOME app, where they have the option to choose specific rooms for the robots to clean or an entire level of their home. The Roomba s9+ will go out and vacuum the selected area. Once the Roomba robot docks, the Braava jet m6 robot will leave its dock and begin mopping.
